

IEEE 802.3bt 4PPoE Standard: new requirements for LAN cabling

Matthias Gerber,
Market Manager LAN Cabling, R&M
November 2018

Development of PoE

- Power increase

	Power	Name	Code	IEEE
Level 1	13 W	Power over Ethernet	PoE	802.3af
Level 2	22 W	PoE Plus	PoEP	802.3at
Level 3	55 W	4-Pair PoE	4PPoE	802.3bt
Level 4	90 W	4-Pair PoE	4PPoE	802.3bt

Development of PoE

- Power increase

	Power	Name	Code	IEEE
Level 1	13 W	Power over Ethernet	PoE	802.3af
Level 2	22 W	PoE Plus	PoEP	802.3at
Level 3	55 W	4-Pair PoE	4PPoE	802.3bt
Level 4	90 W	4-Pair PoE	4PPoE	802.3bt

Development of PoE

- Power increase

	Power	Name	Code	IEEE
Level 1	13 W	Power over Ethernet	PoE	802.3af
Level 2	22 W	PoE Plus	PoEP	802.3at
Level 3	55 W	4-Pair PoE	4PPoE	802.3bt
Level 4	90 W	4-Pair PoE	4PPoE	802.3bt

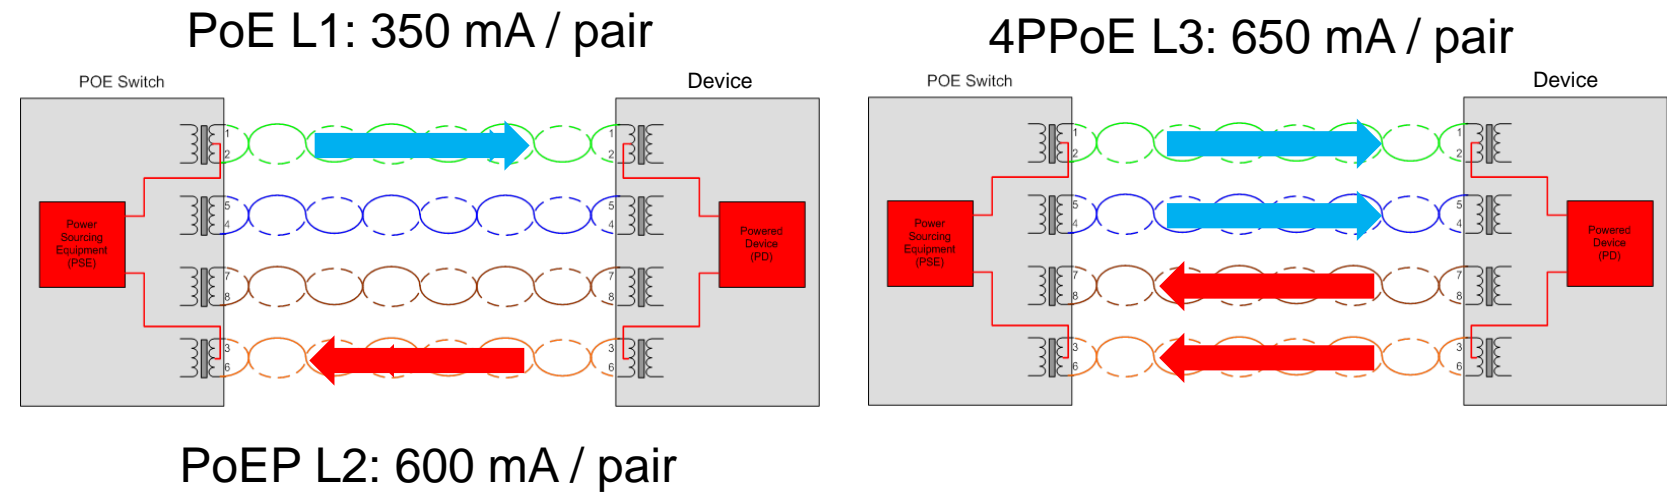

Development of PoE

- Power increase

	Power	Name	Code	IEEE
Level 1	13 W	Power over Ethernet	PoE	802.3af
Level 2	22 W	PoE Plus	PoEP	802.3at
Level 3	55 W	4-Pair PoE	4PPoE	802.3bt
Level 4	90 W	4-Pair PoE	4PPoE	802.3bt

Development of PoE

- Power increase

	Power	Name	Code	IEEE
Level 1	13 W	Power over Ethernet	PoE	802.3af
Level 2	22 W	PoE Plus	PoEP	802.3at
Level 3	55 W	4-Pair PoE	4PPoE	802.3bt
Level 4	90 W	4-Pair PoE	4PPoE	802.3bt

PoEP L2: 600 mA / pair

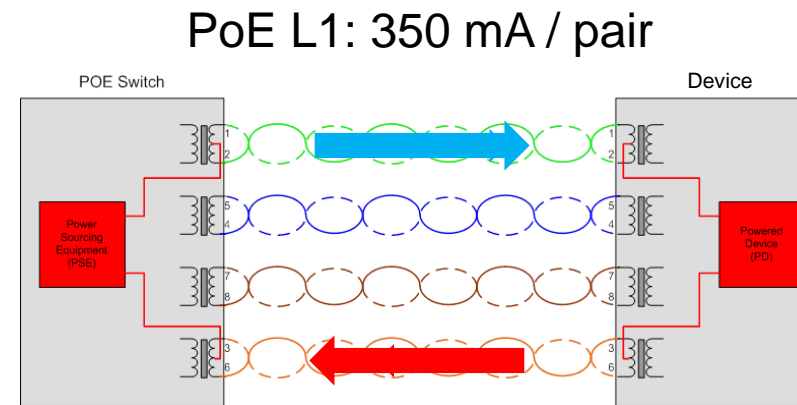

4PPoE L4: 1000mA / pair

Development of PoE

- Power increase

	Power	Name	Code	IEEE
Level 1	13 W	Power over Ethernet	PoE	802.3af
Level 2	22 W	PoE Plus	PoEP	802.3at
Level 3	55 W	4-Pair PoE	4PPoE	802.3bt
Level 4	90 W	4-Pair PoE	4PPoE	802.3bt

PoEP L2: 600 mA / pair

4PPoE L4: 1000mA / pair

- Change in usage condition

Development of PoE

- Power increase

	Power	Name	Code	IEEE
Level 1	13 W	Power over Ethernet	PoE	802.3af
Level 2	22 W	PoE Plus	PoEP	802.3at
Level 3	55 W	4-Pair PoE	4PPoE	802.3bt
Level 4	90 W	4-Pair PoE	4PPoE	802.3bt

PoEP L2: 600 mA / pair

4PPoE L4: 1000mA / pair

- Change in usage condition

PoE: Impact of on cabling

- PoE current can produce significant heat
- Cable temperature increases depending on installation conditions (e.g. bundle size, environmental conditions)
- Higher cable temperatures increase the link attenuation (IL)
- Attenuation budget can result in reduced link lengths
- Cable temperatures rating must be observed
- Guidance: EN TR 50174-99-1 or ISO/IEC TR 29125
- Planning and execution determine PoE capability → use a planning tool

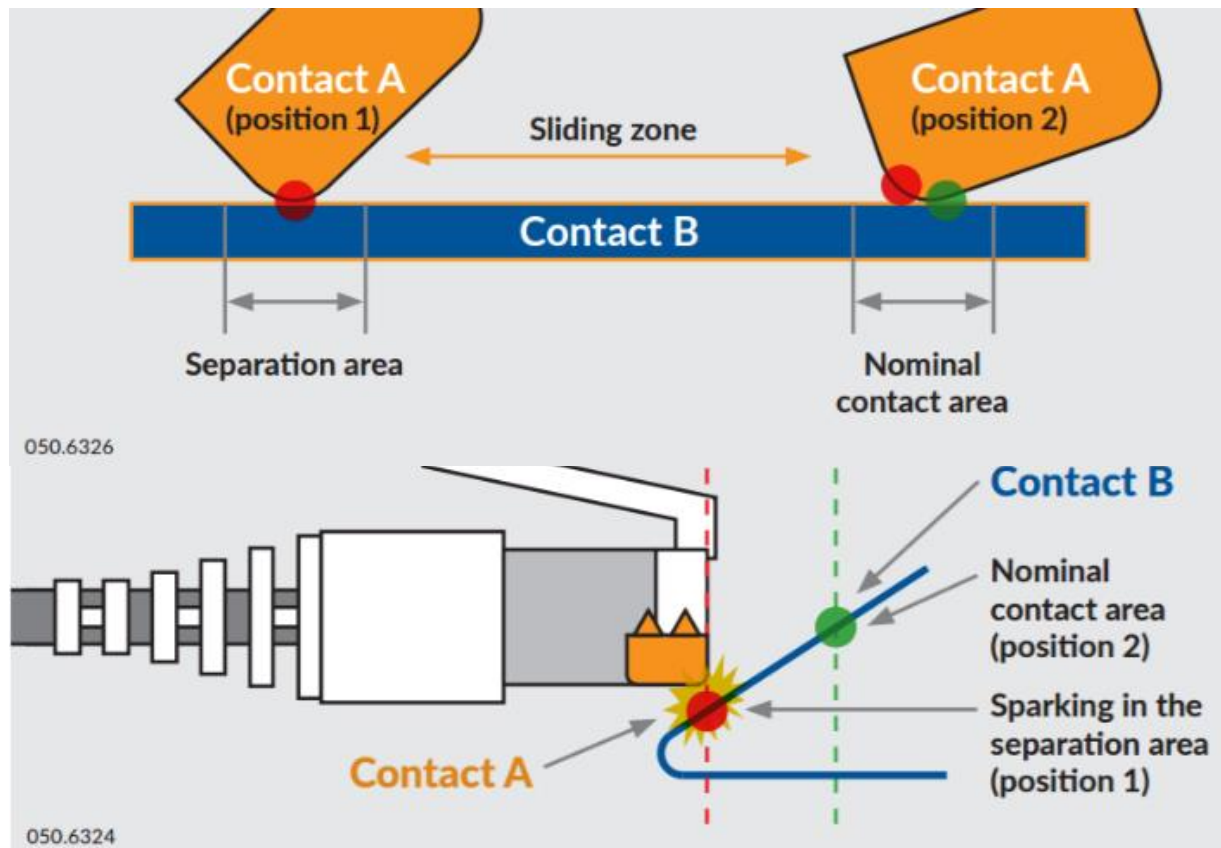

Connectivity: spark erosion

- Unplugging under load creates sparks that can destroy the contacts
- The higher the transmitted power the higher the destruction
- IEC 60512-99-2 tests, whether a RJ45 connection supports 4PPoE

Contact resistance vs. temperature

- Current through a contact resistance produces heat
- FEM simulation of contact temperature increase due to PoE

Source: Internet

Contact resistance vs. temperature

- Current through a contact resistance produces heat
- FEM simulation of contact temperature increase due to PoE
- Wire insulation: PE-HD (continuous use 80° C, melting: 130° C)
- @ 45° C ambient temperature: 85° C increase to melt down

Source: Internet

Insulation Piercing Contact (IPC)

- IPC termination: rigid contact plate is pushed through the stranded wire
- Contact force (wire to contact) is built up by wire material properties

Insulation Piercing Contact (IPC)

- IPC termination: rigid contact plate is pushed through the stranded wire
- Contact force (wire to contact) is built up by wire material properties
- Over time, due to mechanical stress and thermal movement causing copper relaxation and plastic creepage, the contact force disappears

Insulation Piercing Contact (IPC)

- IPC termination: rigid contact plate is pushed through the stranded wire
- Contact force (wire to contact) is built up by wire material properties
- Over time, due to mechanical stress and thermal movement causing copper relaxation and plastic creepage, the contact force disappears

Insulation Displacement Con. (IDC)

- IDC termination: wire is clamped between spring loaded arms of a contact
- Slot of the contact is designed to cut through the insulation of the wire and constantly apply a contact force to the copper wire

Insulation Displacement Con. (IDC)

- IDC termination: wire is clamped between spring loaded arms of a contact
- Slot of the contact is designed to cut through the insulation of the wire and constantly apply a contact force to the copper wire
- IDC is vibration-resistant, moisture-resistant, dust and gas-tight, corrosion-protected and therefore does not age

Comparison of terminations

- Termination technologies should be tested according IEC 60352-x
- Artificial aging test with dry heat at 70° C for 40 days / $\Delta R < 15 \text{ m}\Omega$
- IDC: stabilizing at low resistance level
- IPC: continuous resistance increase, over time every value will be reached

Comparison of terminations

- Termination technologies should be tested according IEC 60352-x
- Artificial aging test with dry heat at 70° C for 40 days / $\Delta R < 15 \text{ m}\Omega$
- IDC: stabilizing at low resistance level
- IPC: continuous resistance increase, over time every value will be reached

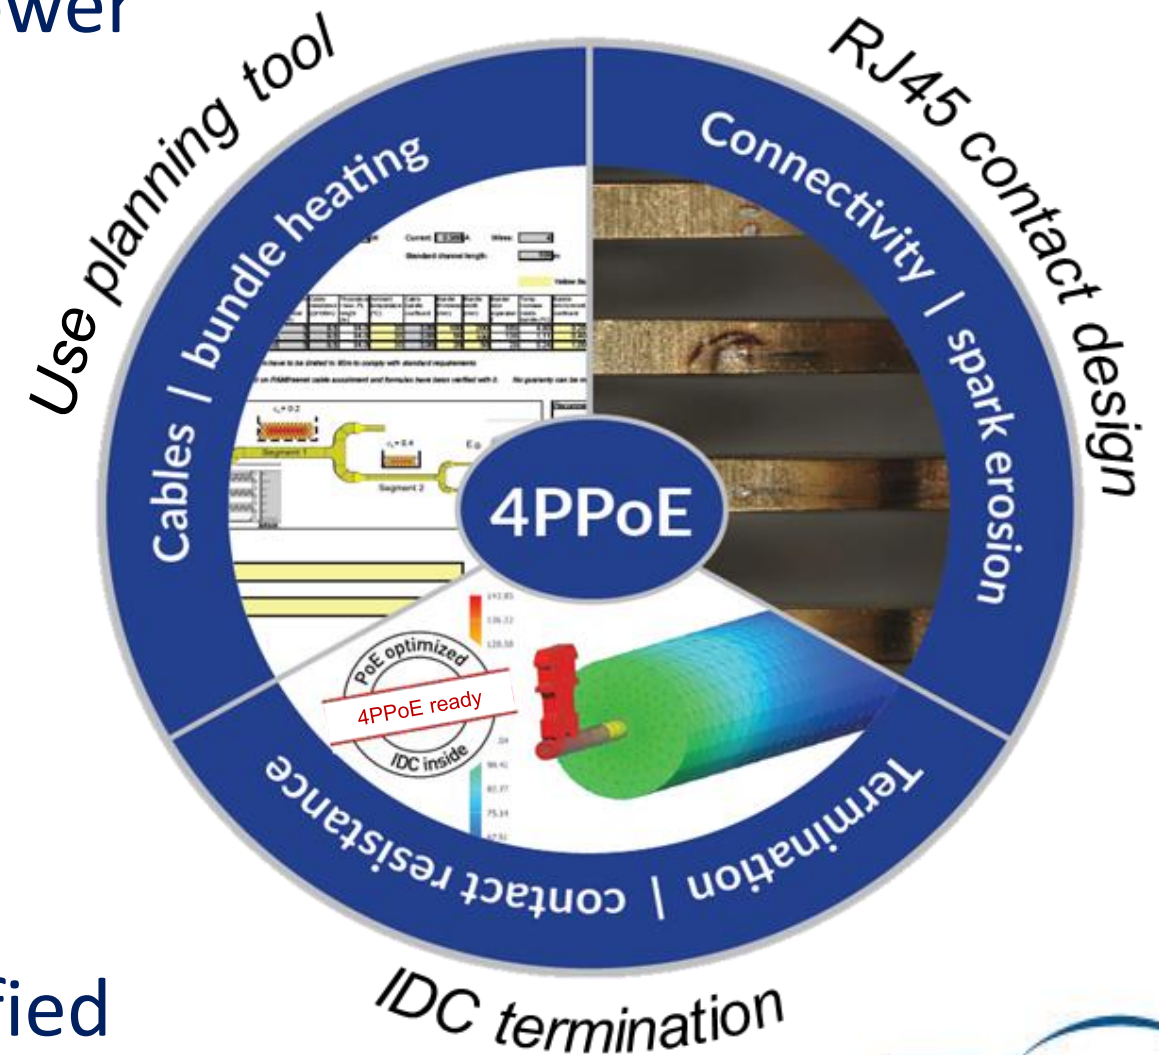

Source: Internet

Summary and Conclusions

- 4PPoE applications with continuous high power demands change requirements
- Planning, installation and product selection have to work together to support 4PPoE
- Over time, IPC connections are not sufficient to support these demands
- IDC connections are the perfect choice for wire terminations used for 4PPoE
- For reliable, long term 4PPoE support patch cords with IDC termination should be specified

Thank you !
