

Importance of firestop in mission critical facilities

Matteo Moccia

Hilti Italia S.p.A.

matteo.moccia@hilti.com

Introduction

What is firestop and why is it especially important when designing cable runs in critical facilities?

How can firestop affect:

- **server contamination** from dust during cabling changes?
- **spread of airborne disease** in a hospital?
- **patient recovery time** as a result of noise?

What do designers need to understand?

To answer these questions we must first understand some basics...

Fire statistics in Italy

Every year

- **30-50.000** fires
- **152 deaths (in 2012)**
- **200 M€ in property damage**

A fire department
responds to a fire **every
44 seconds**

More than **6 out of 10**
civilian deaths caused by
fire were due to fires in
buildings

Sources:

Nucleo Investigativo Antincendi Roma, "Gli incendi di natura elettrica", 2017

Corpo Nazionale Vigili del Fuoco, "Statistiche sulle vittime di incendi ed esplosioni", 2012

Why passive fire protection is so important for data centers?

7.000 €/min

**Most non-home fires (78 %) begin with
electronic equipment**

Sources:

Research published by Ponemon institute in Dec 2013

John R Hall report – Issues Mar 2012

National Fire Protection Association (NFPA) Report

Why Smoke & Fire are key concerns?

3/4 of all fire deaths are caused by smoke inhalation

Approximately **57%** of people killed in fires are not in the room of the fire's origin

47% of survivors caught in a fire **could not see** more than 3.5 metres.

Smoke travels **0.6 - 2.2 meters per second** under fire conditions

Hall, Jr. John R. NFPA Fire Analysis & Research, Quincy, MA. "Burns, Toxic Gases, and other Hazards".

NFPA Fire Protection Handbook, 18th Ed. Table 8-1P. Pg. 8-17

NFPA Fire Protection Handbook, 18th Ed. Table 1-1P. Pg.1-15.

Estimate based upon ceiling jet velocity calculations for typical ceiling heights and heat release rates.

How do we reduce the risk of fires in buildings?

REDUCE THE RISK OF FIRE

Reduce the frequency:
PREVENTION

Reduce the effects:
PROTECTION

ACTIVE: it requires an activation by a human or system (sprinkler, extinguisher, ecc...)

PASSIVE: non richiede l'intervento di un operatore o di un impianto (compartimentazione)

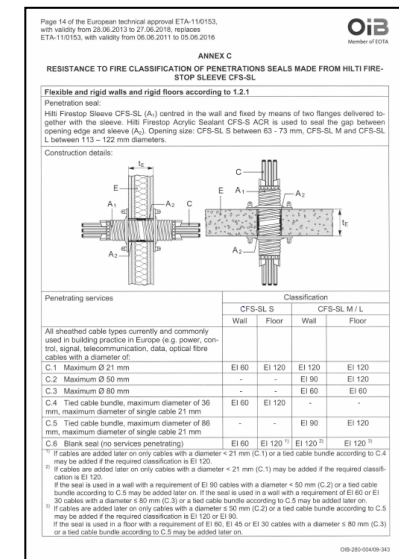

What is Firestop?

- **Firestop systems** (if installed correctly), help **restore the integrity** of a floor or wall as it is penetrated by an object or joint and resist the spread of smoke and fire.
- **Firestop** is part of the **life safety plan** in building structures.

Codes and standards by location

- Codes in most countries require firestopping to be tested, designed and installed per a **testing standard**.
- Firestop systems are tested according to international standards such as:
Europe: EN 1363, DIN 4102
USA: ASTM E 814 / UL 1479
Canada: CAN/ULC S-115
- A successful test yields an **approval** or firestop listing.

Steps in fire test procedure

1. Assembly is placed on furnace.

2. Assembly is exposed to fire test.

3. Assembly is subjected to hose stream test (if required)

4. Assembly results after hose stream.

Officially approved systems

The **ETA** (European Technical Assessment) is the official document granted to a manufacturer based on third-party tests.

UL INTERNATIONAL (UK) LTD
Warren's House, Building C,
The Outbush,
Old Portsmouth Road,
Guldford - GU5 1LR,
United Kingdom

designated according to Article 29 of the Regulation (EU) No 305/2011 and member of
EOTA (European Organisation for Technical Assessment, www.eota.eu)

European Technical Assessment

ETA 17/0081
of 08/08/2018

Technical Assessment Body issuing the ETA and designated according to Article 29 of the Regulation (EU) No 305/2011: UL International (UK) Ltd

Trade name of the construction product Hilti Firestop Sleeve CFS-SL GA

Product family to which the construction product belongs Fire Stopping and Sealing Product: Penetration Seals

Manufacturer Hilti AG,
Feldkircherstrasse 100
FL-6850 Schaan
Liechtenstein
Internet: www.hilti.com

Manufacturing plant(s) HILTI plant 14

This European Technical Assessment contains 24 Pages including 3 Annexes which form an integral part of this Assessment.

This European Technical Assessment is issued in accordance with regulation (EU) No 305/2011, on the basis of EAD 350454-00-1104, September 2017

This version replaces ETA 17/0081, Dated 21/06/2017

Translations of this European Technical Assessment to other languages shall fully correspond to the original issued document and should be identified as such.
Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may be made, with the written consent of the issuing Technical Assessment Body. Any partial reproduction has to be identified as such.

ETA 17/0081 of 08/08/2018

The application must be clearly indicated in the product certification

It contains the **field of application** consisting of:

1. Base material (a fire-rated wall or floor assembly)
2. A penetrating item or items passing through an opening in the assembly
3. The materials designed to help prevent the spread of fire through the openings.

A.4.3 Seal Type 2a Detail:

A.4.4 Seal Type 1a Application Information (CFS-SL GA S/M/L and CFS-S ACR)
Flexible and Rigid Walls

What is the average hourly rating of any firestop product?

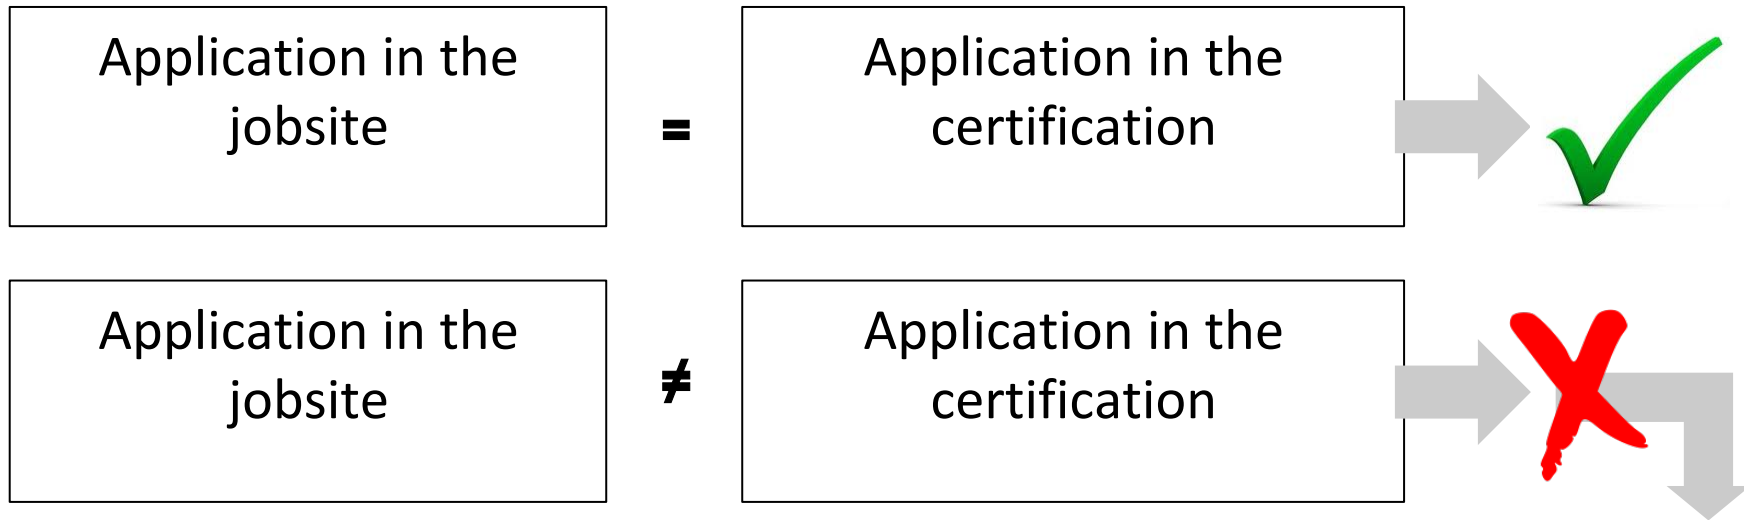

ZERO

**Only Firestop Systems
have ratings!**

What if the application is not listed in the certification of the product?

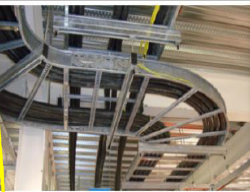

DOCUMENTATION NEEDED

Engineering Judgement by the
producer

Test lab positive evaluation

Airflow mitigation

Data	Power	Cooling	Other
Data Cabling	Electric Cabling	Piping/Ducts	Fire, Gas Suppression
			Emergency Lighting
Highest risk			Access & Security Control Cabling

- ✓ Creates largest volume of openings through wall and floor assemblies
- ✓ Present unique challenge due to continuous **cable re-penetration**

Cable Re-penetration increases risks to people and assets

Pre-engineered firestop eliminates the risk of human error

New construction

- Traditional systems are also the most often **incorrectly installed**
- **Inspection failures** are common yet don't catch all incorrect installations

Renovation

- When repenetrating, there is lack of coordination resulting in **wide-open penetrations**
- **Higher risks** to fire protection
- Increase **energy costs**

What firestop products are available on the market?

- Cushions

- Coated Board

- Foam

- **Preformed devices!**

Solutions should fit application needs

Performance Requirements

- ✓ Minimum Code compliance for firestop system rating

- ✓ Ensure life safety and property loss prevention
- ✓ Correct installation
- ✓ Re-penetrability (MAC work)
- ✓ Ease of inspection
- ✓ Prevent airborne disease transmission
- ✓ Prevent dust contamination
- ✓ Room pressurization
- ✓ Reduce cooling and heating costs

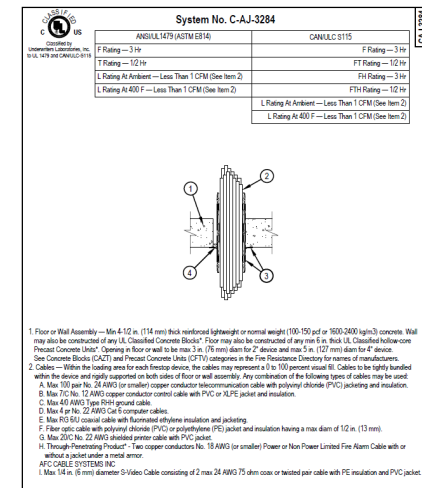

Solution

Traditional Firestop System
(generates dust and greater potential to human error)

Pre-formed firestop system
(fiber-free for easy cable changes)

Clearly convey your design intent

- Mandate cable pathway devices in Master specs
- Draw cable pathways devices on Datacom or Telecom details
- Create documentation regarding firestop placement in layout for future maintenance

The firestop journey

3 things to remember

- **Fire & Smoke** are devastating occurrence that happen more often than we think
- Designers should consider maintenance and **future cable capacity**
- Reach out to us for **support!**

Thank you
